

Uneven Support for Kinship/Grandfamilies

State TANF Child-Only Grants

Background

At the request of the Grandfamilies & Kinship Support Network (Network), Child Trends identified and compiled state-level information on Temporary Assistance for Needy Families (TANF) “child-only” benefit recipients; benefit amounts; and select state policies as they relate to children raised by their grandparents, other relatives, or close family friends.

Please see the accompanying Network resource, [“Improving Support for Kinship/Grandfamilies: State Strategies for TANF Child-Only Grants and Related Assistance.”](#) That piece contains background information on TANF child-only grants, along with state-level strategies that can be implemented to improve access to this important source of financial support and other services for children whose parents cannot raise them.

Findings

This brief presents findings from the analysis of the data collected, highlighting the variation across states. Appendix A provides detailed data tables.

TANF Child-Only Caseload Composition

Nationwide, TANF child-only cases constituted about 55% of the total TANF caseload in federal fiscal year 2023. This figure has been rising for decades; it was 37% in 2001.¹

The proportion of the TANF caseload made up of child-only cases varies widely across states, due to state policies and populations. For example, in Idaho, 98% of families receiving TANF benefits in 2023 received TANF child-only, while, in New Jersey, only about 30% of families receiving TANF were receiving child-only grants.

The percentage of children who receive TANF child-only while being raised by their grandparents or other non-parental caregivers ranges significantly between states – from 11% in Rhode Island to over 99% in Idaho (see Figure 1 below and Table A1 in the Appendix for details).

9% 99%

Access to TANF Child-Only

^a For each state, we calculated the proportion of children receiving TANF child-only grants who live with a grandparent or other non-parent caregiver as a percentage of the approximate total number of children in kinship care (see Table A1). We cannot confirm whether the same children are represented in both the number of children receiving TANF child-only who live with non-parental caregivers (according to federal TANF data) and the number of children living in kinship care (according to the Annie E. Casey Foundation's adapted federal data).

Figure 2. Informed estimate of the percentage of children in non-parental care receiving TANF child-only benefits

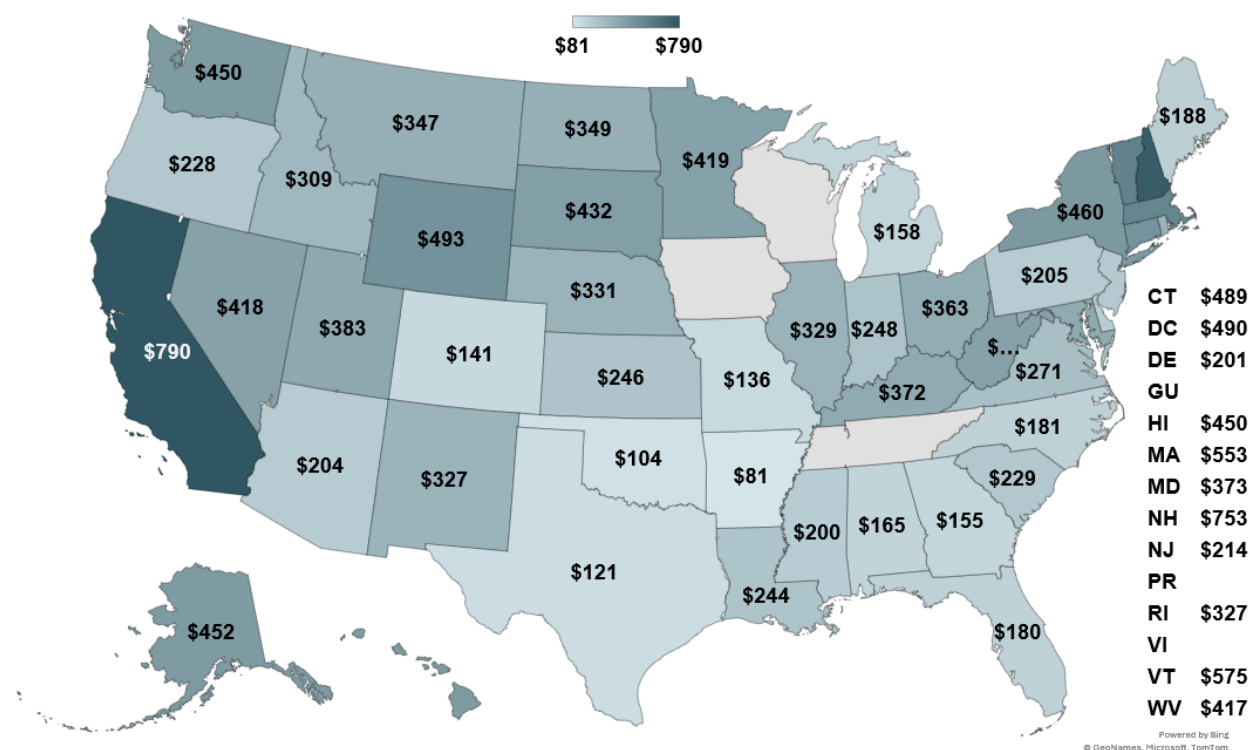

Monthly Benefit Amounts

We found that the monthly benefit amounts^b vary greatly across states.² In 2023, monthly maximum benefit amounts for one child ranged from \$81 in Arkansas to \$780 in California, with a national average of \$328 per month (Figure 3). In 24 states, the maximum monthly benefit for one child is under \$300. These numbers are all significantly lower than the average monthly foster care maintenance payment of \$915 per child placed in a relative foster home.³

Unlike foster care maintenance payments, TANF child-only monthly benefits are generally not provided in per-child increments (see below for more on this). Moreover, maximum monthly benefit amounts can vary in the child's region or county of residence. Table A2 provides more detail, including variation by county, where relevant.⁴

^b Note: Benefit amounts reflect 2023 rates listed in the Urban Institute Welfare Rules Database (see endnotes for citations), unless updated information was available on state/territory websites as of January 2025.

Figure 3. Maximum monthly benefit (one child), by state

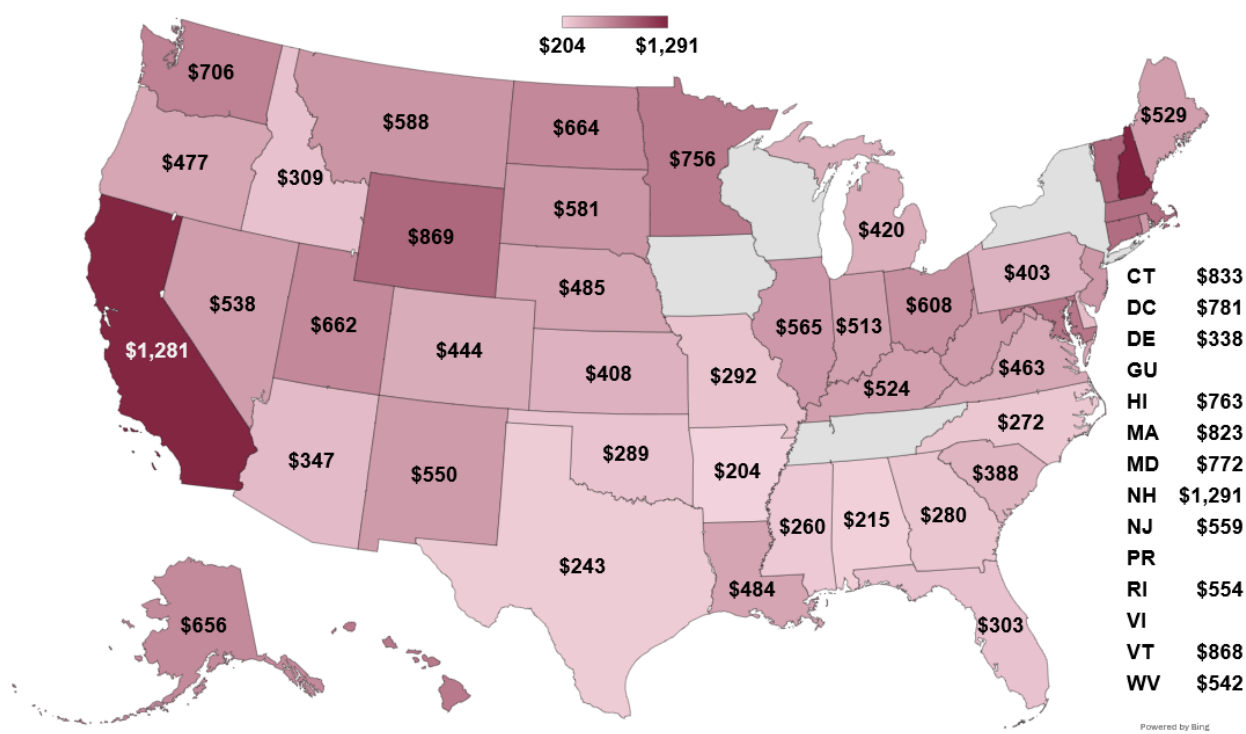

Maximum monthly benefits for two children in a household (Figure 4) range from \$162 in Arkansas to \$1,022 in New Hampshire, with an average maximum of \$447 per month.

A choropleth map of the United States illustrating the average cost of a new home in 2015 by state. The map uses a color gradient from light pink to dark red to represent the cost range. California is the most expensive state at \$1,013, while Texas is the least expensive at \$174. A legend on the right side of the map provides the specific average cost for each state and territory.

State/Territory	Average Cost
CT	\$661
DC	\$612
DE	\$270
GU	
HI	\$607
MA	\$688
MD	\$620
NH	\$1,022
NJ	\$425
PR	
RI	\$449
VI	
VT	\$718
WV	\$480

Maximum monthly benefits for three children range from \$204 in Arkansas to \$1,291 in New Hampshire (see Figure 5), with a national average maximum of \$555 per month.

Figure 5. Maximum monthly benefit (three children), by state

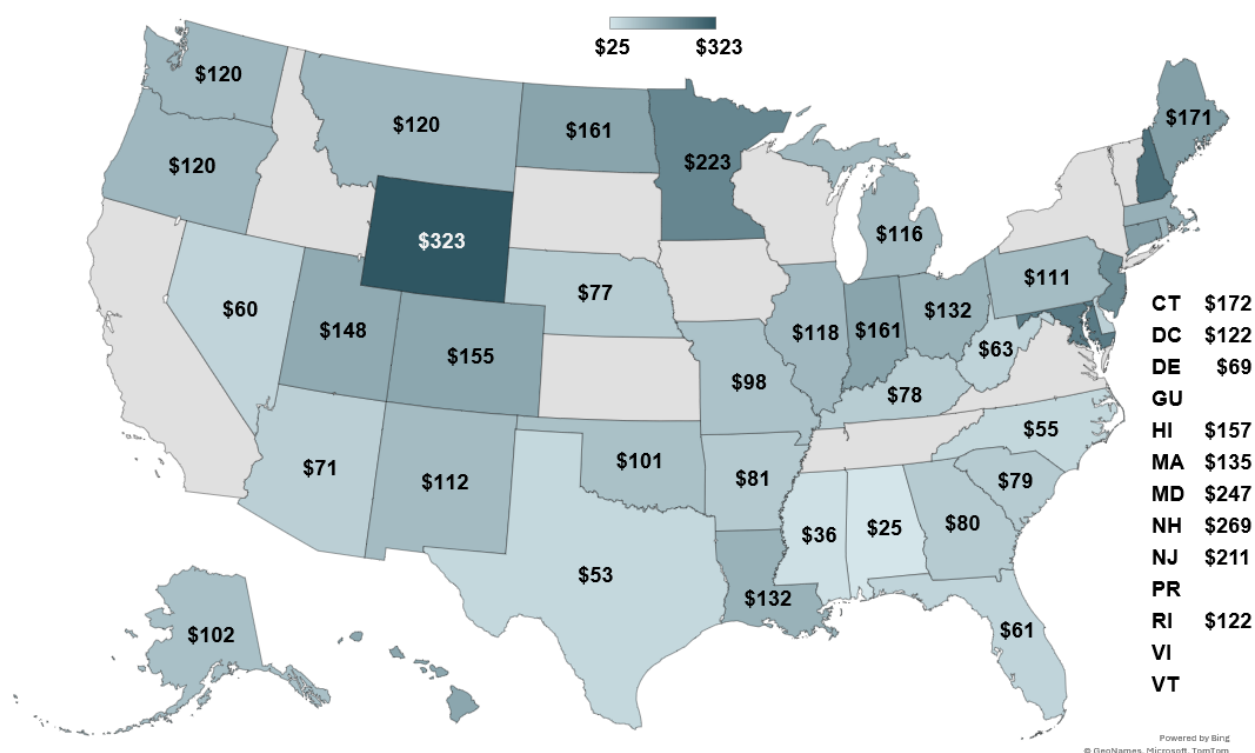

**Note that the benefit amounts shown for California, Kansas, Vermont, and Virginia are averages of the amounts offered in different regions of those states. Additionally, South Dakota provides a different amount for children who were placed in the home by a child welfare agency.*

Multiple-Child Households

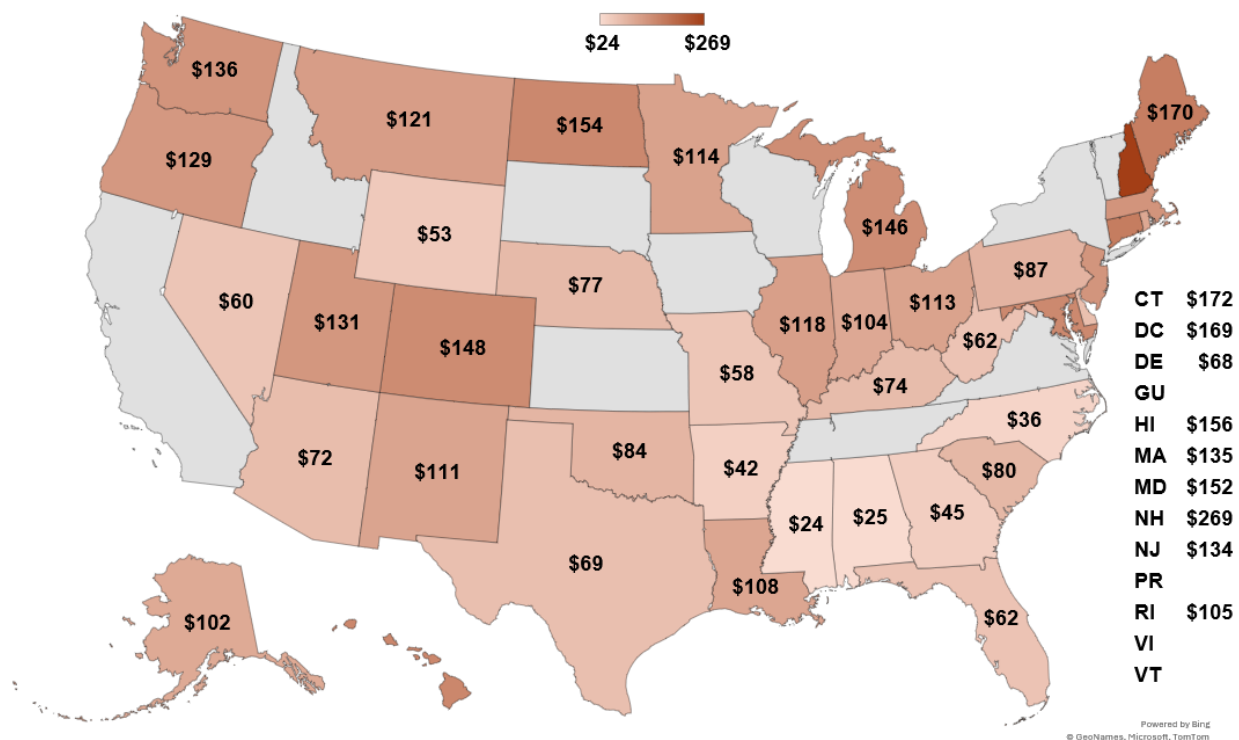

States generally increase TANF benefits incrementally for families with multiple children, though increases in benefits for a second and/or third child vary significantly across states (see Table A2). We found no states that provide a per-child grant, as is done with foster care maintenance payments. Idaho provides the same amount (\$309) regardless of the number of children in the household.⁵ Increases for a second child (Figure 6) range from \$25 (Alabama) to \$323 (Wyoming).

Figure 6. Maximum Monthly Benefits for Second Child

Increases for a third child in a household (see Figure 7) range from \$24 (Mississippi) to \$269 (New Hampshire).

Figure 7. Maximum Monthly Benefits for Third Child

Differences in the monthly maximum benefit provided for second versus third children in a household vary significantly. However, as noted above, no state increases its benefits on a per-child basis, meaning that **the per-child benefit decreases when there are multiple children in a household.**^c

- In 17 states, the monthly benefit provided for a *second* child is the same as (or within one dollar of) the amount provided for a *third* child. In other words, these states offer a “per-child” increase that is the same amount for a second child and a third child in a given household, but not equal to the amount allotted for the first child. For example, in Alaska, the maximum monthly benefit for one child is \$452,

^c A few states provide TANF child-only benefits that increase on a roughly per-child basis, at least for the first two or three children, but they do not categorize the benefits as “per-child” or have a policy mandating that each child gets a certain amount for the TANF child-only benefit. Colorado comes the closest to offering equal benefits for the first three children in a household, and per-child benefits in that state actually increase slightly with the addition of a second or third child (from \$141 per child for one child to \$148 per child for two or three children). Oklahoma and Maine also provide TANF child-only benefits such that the per-child benefits for households with two or three children are within \$25 of the benefits provided to households with one child. Arkansas and New Jersey provide equal or near-equal benefits for the first two children in a household, but the per-child benefit rate drops significantly if a household includes three children.

a second child in a household receives \$102 per month, and a third child also receives \$102 per month. As a result, while the maximum per-child benefit for families with one child is \$452, the maximum per-child benefit for families with two children is \$277, and it is \$219 for families with three children.

- ▶ In 14 states, the benefit provided for a second child is not quite the same as the benefit provided for a third child, but the **difference is \$25 or less per month**. For example, in Kentucky, a second child increases monthly benefits by \$78 and a third child increases monthly benefits by another \$74 (difference of \$4 per month). The maximum monthly TANF child-only benefit for one child in Kentucky is \$372. The maximum monthly benefit for two children is \$450 (\$225 per child). In households with three children receiving TANF child-only, the maximum monthly benefit is \$524 (\$175 per child).
- ▶ In 8 states, the benefit provided is more than \$25 **greater for a second child** than the benefit for a third child. The most dramatic example is Wyoming, where the maximum benefit amount for one child is \$493. This amount increases by \$323 for a second child, for a total maximum benefit of \$816 for two children (\$408 per child). However, the benefit increases by only \$53 for a third child, for a maximum monthly benefit of \$869 for three children (\$290 per child).
- ▶ In only Michigan and Washington, D.C., the benefit provided is more than \$25 **greater for a third child** compared to the additional benefit for a second child. In Washington, D.C., the maximum monthly benefit for one child is \$490; this increases by \$122 for a second child, resulting in a total maximum benefit of \$612 for two children (\$306 per child). The benefit increases by an additional \$169 for a third child, resulting in a maximum benefit of \$781 for three children (\$260 per child).

We did not find information for monthly maximum benefits for four or more children in a household. Some states have caps on the monthly benefit amount and/or the number of children in a household for whom benefits can be provided.

Child County/Region of Residence

Five states (California, Kansas, New York, Vermont, and Virginia) offer varying benefit amounts based on the child's county or region of residence, generally dependent upon cost of living or the rural/urban designations of various counties or regions. For instance, in California, children living in areas designated as having higher costs of living can receive a maximum of \$809 per month, while those in other counties receive \$770 per month.⁶ Children in Kansas can receive monthly maximums of \$224 in "Rural counties," \$229 in "High Cost Rural Counties," \$241 in "High Population Counties," and \$267 in "High Cost High Population Counties."⁷ In New York, monthly maximum benefits average \$460, with some variation based on county of residence. Vermont provides a maximum of \$587 to children in the state's most populous county and \$562

to children in all other counties. Children in Virginia may receive monthly benefits of either \$226 or \$316, depending on where they live.

Eligibility & Requirements

Caregiver-Child Relationships

While TANF child-only payments are typically available to children being raised by their grandparents or other caregivers related by blood or marriage, children raised by “fictive” or non-related kin are often not eligible. For more information, see [“Improving Support for Kinship/Grandfamilies: State Strategies for TANF Child-Only Grants and Related Assistance.”](#)

Child Age & School Attendance

Most states allow children to remain eligible until they are 18 years old, as long as they are in school. Nearly all states end benefits at age 17 for a child who is not attending secondary, vocational, or technical school full time, with Washington, D.C. ending benefits at 15 for those youth.⁸ Virginia ends TANF benefits for children aged 5 or older who are considered truant from school, until the caregiver cooperates in a plan to resume schooling.⁹

Michigan ends eligibility for the entire family if a child between ages 6 and 15 is not attending school – regardless of the school participation of other eligible children in the household. Puerto Rico ends benefits at age 17 for all youth. Many states extend benefits beyond age 18 under limited conditions. Several states allow children who turn 18 while still in high school to receive benefits through the month of their high school graduation or through the month of their 19th birthday, whichever comes first. A small number of states allow continued eligibility for transition-age young adults enrolled in a special education program (e.g., New Jersey and New Mexico allow these young adults to receive benefits until they reach age 21 and 22, respectively).

Caregiver Work Requirements

Of all states and territories, only Guam has work requirements for kin caregivers seeking TANF child-only benefits. Work requirements generally apply to TANF family grants, when the caregiver is also in the assistance unit. However, several states exempt individuals aged 55 and over and those caring for young children from work requirements for TANF family grants.

Caregiver Income and Assets (Means Testing)

As of 2022, nearly all states and territories exclude caregivers’ income in determinations of TANF child-only eligibility and benefit amounts. Arizona and Nevada evaluate total family income (including non-parental caregivers’ income) for child-only cases, limiting eligibility to families with incomes that are no more than 130% of the federal poverty

level (FPL) and 275% of the FPL, respectively. Publicly available information suggests that Oregon may also consider caregiver income for TANF child-only cases and may limit eligibility to families with incomes that are no more than 185% of the FPL, and that Texas includes caregiver income in TANF child-only determinations if the caregiver is legally responsible for the child.^d

No U.S. state or territory considers non-parental caregivers' assets when determining eligibility or benefit amounts for child-only grants.¹⁰

Child Support Payments for Children Receiving TANF

Federal law requires that TANF recipients must cooperate with state policies related to child support enforcement – and assign the state as the payee of any child support received on behalf of the child receiving TANF benefits. Importantly, federal laws allow for “good cause exemptions” from these requirements, and states have discretion in applying those exemptions and in implementing other policies related to this issue.

Child Support “Pass-through” Policies

As of 2023, 26 states, Washington, D.C., and Puerto Rico have some form of “pass-through” policy, allowing some or all child support paid to the state under this requirement to be “passed through” to the child receiving TANF.¹¹ Of those:

- ▶ 12 states, Washington, D.C., and Puerto Rico “pass through” a maximum dollar amount per month per household/family:
 - \$50: Alaska, California, Connecticut, Delaware, Maine, Massachusetts, Puerto Rico, Rhode Island, Vermont
 - \$75: Texas
 - \$100: Montana, New Jersey, Virginia
 - \$150: Washington, D.C.
- ▶ Three states (Georgia, South Carolina, and Tennessee) pass through a variable amount “up to unmet need” (per “fill-the-gap” budgeting policies, variably defined by state).
- ▶ One state (Wisconsin) passes through a percentage (i.e., 75%) of child support payments.
- ▶ Only Colorado and Minnesota pass through the full amount of child support paid.

^d For more information on this, see the [Urban Institute Welfare Rules Database](#), Table 1.D.3.

- ▶ Eight states pass through different amounts for households with varying numbers of children. Seven states (Illinois, Maryland, New Mexico, New York, Pennsylvania, Washington, and West Virginia) pass through up to \$100 to households with one child and up to \$200 to households with two or more children. Oregon passes through \$50 per child, up to \$200 per family per month.

Child Support “Disregard” Policies

We found that all jurisdictions that have a “pass-through” policy have an accompanying policy that “disregards” any “passed through” child support in determinations of TANF eligibility and/or benefit amounts. Two states’ policies indicate that they (Maryland and Minnesota) “disregard” \$100 for households with one child and \$200 for households with two or more children.

Child Support “Cooperation” Requirements & “Good Cause Exemptions”

The little public information available presents a complex picture of significant variation across states, complicated exceptions and conditions, and periodic changes with regard to child support “cooperation” requirements and “good cause exemptions.” Some states allow caregivers (parental and non-parental) to apply for “good cause exemptions” from cooperating with child support, i.e., requiring assignment of child support payments to the state. In some states, this exception is related to fears of violence or reprisal from the parent(s) making child support payments. In at least two states (Massachusetts and Wyoming), all kin caregivers are eligible for “good cause exemptions.”¹²

Methods

Child Trends used publicly available information regarding all 50 states; Washington, D.C.; Guam; Puerto Rico; and the Virgin Islands, including federal reports, state/territory websites and policy documents, and pre-existing analyses (see footnotes for full citations and data sources).

Table 1. Overview: Data Sources

Data Point	Source

State TANF Policies and Benefit Amounts	Urban Institute Welfare Rules Databook Tables; ¹⁵ State Websites

Limitations

This summary relies on publicly available data and information from state and federal data sources. We relied largely on single sources of data from most or all states, given the labor- and resource-intensive requirements of combing state laws and policies. Select states have noted errors in select data reported to entities that compile state-level data for federal monitoring.

Appendix A: Data Tables

Tables A1 and A2 below provide detailed state-level data, gathered from publicly available data (see Methods section for details and References section for full citations). Please see documentation for original data sources for notes regarding margins of error and/or data quality concerns. Where possible, we supplemented missing data and/or confirmed publicly available data with information from state-level contacts.

Note: Range of values = variation by county; mean values within each range were used to calculate national averages. South Dakota offers higher maximum monthly benefit amounts for children placed by a child welfare agency (1 child = \$840, 2 children = \$893, 3 children = \$946).

Note: If a state/territory does not have a link associated with it, the data for that state/territory came from the ACF-published data cited elsewhere in this document, unless otherwise cited.

The Grandfamilies & Kinship Support Network: A National Technical Assistance Center (Network) helps government agencies and nonprofits in states, tribes, and territories work across jurisdictional and systemic boundaries to improve supports and services for families in which grandparents, other relatives, or close family friends are raising children whose parents are unable to do so. For more information, please visit www.GKSNetwork.org.

The Network is supported by the Administration for Community Living (ACL), U.S. Department of Health and Human Services (HHS) as part of a financial assistance award totaling \$9,950,000 with 95 percentage funded by ACL/HHS and \$523,684 and 5 percentage funded by non-government sources. The contents are those of the authors and do not necessarily represent the official views of, nor an endorsement, by ACL/HHS, or the U.S. Government.

The Network is a project of
Generations United.
